

McAfee Total Protection for Your Computer

Always on, always up-to-date single solution for your security

New threats emerge every day. Spyware, phishing, viruses, and hackers can steal your valuable data and disrupt your network. Without constant updates, your anti-virus and security software becomes obsolete. Keeping you continuously up-to-date requires a total protection approach against all types of known and unknown threats.

Total Protection means a comprehensive security solution that is always on, always ready, and always up-to-date—not just in the Home or Office, but also when mobile. McAfee® offers you the industry’s first truly integrated security solutions, managed by a single console, and at affordable prices. Delivered as a hosted single solution, McAfee Total Protection protects against viruses, spyware, buffer overflow attacks, hackers, and identity thieves.

Desktop Firewall	✓
Internet Browser Protection	✓

Fully Automated Updates

One of your biggest challenges of guarding against viruses is simply keeping abreast of the latest threats and updates. Can you single-handedly manage, protect, and keep desktops and servers up-to-date from thousands of existing viruses?

Using Bandwidth friendly Rumor Technology, Total Protection provides updates at regular intervals throughout the day across all your computers. This helps eliminate the on-going costs associated with managing and updating anti-virus software yourself costs that can equal nearly 80 percent of the total cost of owning that protection.

And best of all, it’s completely transparent to you. Total Protection continuously monitors your system, comparing your virus data files with the latest ones provided by McAfee and updating them automatically - you never have to worry about updates again.

Mobile users often connect to the network throughout the day representing a high security risk. These problems now become a thing of the past- Total Protection checks for a new anti-virus update at the point of every connection.
